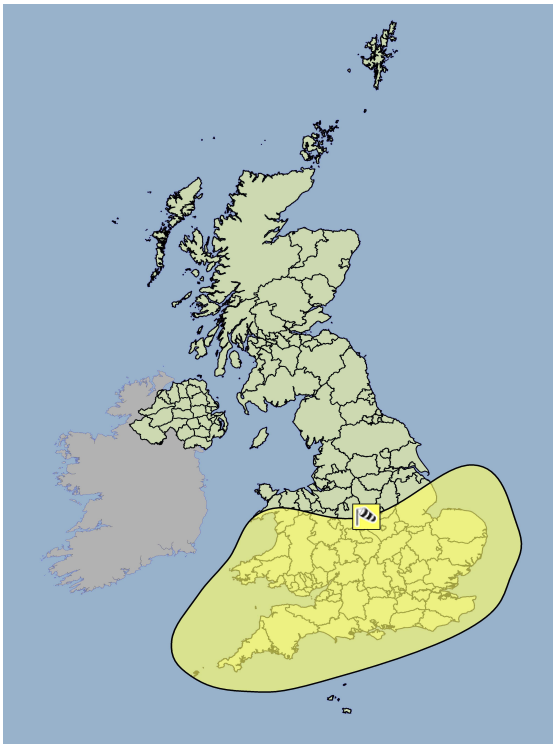
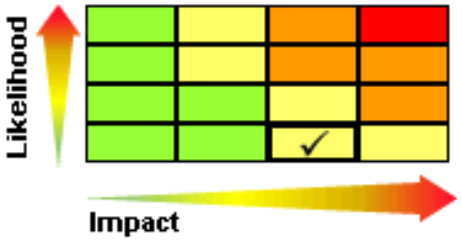
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure, currently forming in the mid-Atlantic, is likely to run quickly northeast somewhere across central Britain early on Friday. This is a complex development and details may yet change. Therefore this alert is likely to be updated again on Thursday, as confidence grows in the track and timing of this system.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **00:10 on Fri, 12th Dec 2014** until **09:00 on Fri, 12th Dec 2014**

There is the potential for gales, severe along some coasts, and accompanied by heavy rain, to spread across southern areas of England and Wales during the early hours of Friday, before easing during the morning. Gusts may reach 50 to 60 mph inland and perhaps around 70 mph in some exposed coastal districts. This is an update of the warning issued on Tuesday, somewhat reducing the northward limit of the impacts due to the gales.

The public should be aware of the risk of damage to trees, disruption to travel and possibly to power supplies.
